Order Now! Orders should be placed through your wholesaler. Please contact your wholesaler immediately for product price and available quantities.

AstraZeneca has dedicated approximately 2500 Professional Sales Specialists to promote the new 50-mg and 400-mg tablets to various medical specialists nationwide.

*All atypical prescriptions: Total prescriptions, Jan. 05-Dec. 05. New prescriptions. Sept. 04-Dec. 05. IMS Health. National Prescription Audit.

[†]The safety of doses above 800 mg/day has not been evaluated in clinical trials. In the elderly and in patients with hepatic impairment, consideration should be given to a lower starting dose, a slower rate of dose titration, careful monitoring during the initial dosing period, and a lower target dose.

The #1 prescribed atypical*

 **Seroquel**[®]
quetiapine fumarate

25 mg, 50 mg, 100 mg, 200 mg, 300 mg & 400 mg tablets

Pharmacist counseling tips for patients

- Take SEROQUEL as prescribed by your doctor
- You should contact your doctor if you feel the need to stop treatment
- Dizziness or lightheadedness can be a side effect of SEROQUEL
- Be sure to drink plenty of water to avoid becoming dehydrated or overheated
- Drowsiness can be a side effect of SEROQUEL, especially when you first start taking it. Do not drive or operate machinery if you feel drowsy
- You should avoid becoming pregnant while taking SEROQUEL
- You should not breast-feed while taking SEROQUEL
- You should avoid consuming alcoholic beverages
- You should inform your doctor of any other prescription or over-the-counter medicine you are taking or plan to take

Important Safety Information

- SEROQUEL is indicated for the treatment of acute manic episodes associated with bipolar I disorder, as either monotherapy or adjunct therapy with lithium or divalproex, and the treatment of schizophrenia. Patients should be periodically reassessed to determine the need for continued treatment
- **Elderly patients with dementia-related psychosis treated with atypical antipsychotic drugs are at an increased risk (1.6 to 1.7 times) of death compared to placebo (4.5% vs 2.6%, respectively). SEROQUEL is not approved for the treatment of patients with dementia-related psychosis**
- Prescribing should be consistent with the need to minimize the risk of tardive dyskinesia. A rare condition referred to as neuroleptic malignant syndrome has been reported with this class of medications, including SEROQUEL
- Hyperglycemia, in some cases extreme and associated with ketoacidosis, hyperosmolar coma, or death, has been reported in patients treated with atypical antipsychotics, including SEROQUEL. Patients starting treatment with atypical antipsychotics who have or are at risk for diabetes should undergo fasting blood glucose testing at the beginning of and during treatment. Patients who develop symptoms of hyperglycemia should also undergo fasting blood glucose testing
- Precautions include the risk of seizures, orthostatic hypotension, and cataract development
- The most commonly observed adverse events associated with the use of SEROQUEL in clinical trials were somnolence, dry mouth, dizziness, constipation, asthenia, abdominal pain, postural hypotension, pharyngitis, SGPT increase, dyspepsia, and weight gain
